

CLAIM AMENDMENTS

1. (previously presented) A method of diagnosing skin disease comprising:
providing a patient having a skin disease selected from the group consisting of
dysplastic melanocytic nevi; banal nevi; lentigines; actinic keratoses; seborrheic keratoses;
basal cell carcinoma; and malignant melanoma;

emitting a beam of visible or near-IR light into a portion of the skin afflicted with
the skin disease;

collecting and analyzing reflected light from the beam, thereby producing a
disease spectrum;

emitting a beam of visible or near-IR light into a control skin portion of the
patient which is not afflicted with the skin disease;

collecting and analyzing reflected light from the beam, thereby producing a
control spectrum;

comparing the control spectrum and the disease spectrum; and

identifying the skin disease as dysplastic melanocytic nevi; banal nevi;
lentigines; actinic keratoses; seborrheic keratoses; basal cell carcinoma; or malignant
melanoma based on said comparison, said method of diagnosing skin disease having a rapid
acquisition time of minutes.

2. Cancelled.

3. (previously presented) The method according to claim 1 wherein the
control spectrum and the disease spectrum are compared at wavelengths corresponding to
visible or near-IR absorption by oxyhemoglobin, deoxyhemoglobin, water, proteins, lipids or
combinations thereof.

4. (original) The method according to claim 1 wherein the control spectrum
and disease spectra are reduced to diagnostic wavelengths by a region selection algorithm.

5. (original) The method according to claim 4 wherein said wavelengths are
selected from the group consisting of: 518-598 nm; 618-698 nm; 718-798 nm; 918-998 nm;
1158-1238 nm; 1418-1498 nm; 1718-1798 nm; and combinations thereof.

6. (original) The method according to claim 1 wherein the control spectrum
and the disease spectrum are compared at wavelengths selected from the group consisting
of: 518-598 nm; 618-698 nm; 718-798 nm; 918-998 nm; 1158-1238 nm; 1418-1498 nm; 1718-
1798 nm; and combinations thereof.

7. (original) The method according to claim 1 wherein the control spectrum and the condition spectra are averaged spectra.

8. (previously presented) The method according to claim 4 wherein the skin disease is diagnosed by performing multivariate analysis on the diagnostic wavelengths.

9. (original) The method according to claim 1 wherein the skin disease is diagnosed comparing the control spectrum and the condition spectrum to a database of visible/near-infrared spectra taken from afflicted and control skin portions of individuals having specific skin diseases.

10. (previously presented) A method comprising:

a) providing a patient having a skin disease selected from the group consisting of: dysplastic melanocytic nevi; banal nevi; lentigines; actinic keratoses; seborrheic keratoses; basal cell carcinoma; and malignant melanoma;

b) emitting a beam of visible or near-IR light into a portion of the skin afflicted with the skin disease;

c) collecting and analyzing reflected light from the beam, thereby producing a disease spectrum;

d) emitting a beam of visible or near-IR light into a control skin portion of the patient which is not afflicted with the skin disease;

e) collecting and analyzing reflected light from the beam, thereby producing a control spectrum;

f) performing a biopsy on the portion of the skin afflicted with the skin disease;

g) classifying the skin disease as dysplastic melanocytic nevi; banal nevi; lentigines; actinic keratoses; seborrheic keratoses; basal cell carcinoma; or malignant melanoma based on the biopsy;

h) assigning the control spectrum and the disease spectrum to a skin disease group based on the classification; and

i) creating a database by repeating steps (a) to (h), characterized in that steps (b) to (e) have a rapid acquisition time of minutes.

11. Cancelled.

12. (previously presented) The method according to claim 10, including step (j) reducing the control spectra and the disease spectra in each skin disease group in the database to diagnostic wavelengths using a region selection algorithm.

13. cancelled.

14. cancelled.

15. cancelled.

16. cancelled.

17. cancelled.

18. cancelled.

19. cancelled.

20. cancelled.

21. (previously presented) The method according to claim 1 wherein the beam is a beam of visible and near-IR light.

22. (previously presented) The method according to claim 10 wherein the beam is a beam of visible and near-IR light.

23. cancelled.
